Amendment to the Specification

Please amend the last paragraph on page 37 of the specification as follows:

Example invocations of the persistence drivers for the configuration files for the command manager, search manager, and virtual document manager are shown in FIG 36, FIG 37, and FIG 38, respectively. -FIG. 36 is an example invocation of the persistence drivers for persisting the command manager configuration files for the gateway, which includes a username value, a template value and a datasource driver designation. FIG. 37 is an example invocation of the persistence drivers for persisting the search manager configuration files, which includes a measure value, a choice value, a parser value, a datasource value, a schema value, a statistic value, and a datasource driver designation. FIG. 38 is an example invocation of the persistence drivers for persisting the virtual document manager configuration files, which includes a datatype value, a datasource value, a schema value, and a datasource driver designation. The template value shown in FIG 34. and FIG 36 is a mechanism for designating a particular template to be used with a particular driver for keyword substitution of virtual keys.
